Tuberculosis Disease:

The tip of the iceberg...

Tuberculosis (TB), an airborne disease, is now the leading global infectious disease killer, ahead of HIV/AIDS, killing 1.8 million annually. However, TB disease is just the tip of the iceberg; over 1/3 of the world’s population and up to 13 million in the U.S. have TB infection and these individuals represent potential future cases of TB.

Join us for this educational opportunity to learn more about TB and what is needed to move the U.S., and the world, towards eliminating this communicable disease.

Philip A. LoBue, M.D., FACP, FCCP, Director, Division of TB Elimination, CDC
Kelly Holland, MD, TB Survivor
Robert Belknap, M.D., Denver Metro TB Program, Immediate Past President, NTCA
