

Support FY25 Appropriations for the Maternal & Child Health, Gavi, and Nutrition Accounts

To cosign, [please use Quill](#)

Dear Colleague:

We invite you to join us in signing the attached bipartisan letter to the State, Foreign Operations, and Related Agencies Subcommittee, urging the Chair and the Ranking Member to support funding for three key Global Health Programs at USAID. Specifically, it requests \$300 million for the Nutrition account and \$1.15 billion for the Maternal and Child Health (MCH) account, which includes \$340 million for Gavi, the Vaccine Alliance.

While reductions in global mortality rates for women and children are two of the biggest success stories in international development, progress has slowed over the past 12 years. There remain significant gaps that additional investments can help close. Last year, around 5 million children under age five died from mainly preventable and treatable diseases, with malnutrition as the underlying cause of roughly half of these deaths. Additionally, 300,000 women die annually of preventable causes related to pregnancy and childbirth. Funding these accounts are vital for maintaining U.S. leadership in the global effort to safeguard and improve the health of women and children.

Please use this [Quill link](#) to sign on to this letter. For any questions or concerns, please contact Matthew Clarkin (matthew.clarkin@mail.house.gov) with Representative Fitzpatrick or Sophie (sophie.jones@mail.house.gov) with Representative Jacobs.

Thank you for your consideration of this request.

The Honorable Barbara Lee
Committee on Appropriations
Subcommittee on State-Foreign Operations
U.S. House of Representatives
Washington, DC 20515

Dear Chairman Diaz-Balart and Ranking Member Lee,

As you determine priorities for the Fiscal Year (FY) 2025 State, Foreign Operations and Related Agencies Appropriations Act, we respectfully request that you provide \$300 million for the Nutrition account and \$1.15 billion for the Maternal and Child Health (MCH) account, which includes \$340 million for Gavi, the Vaccine Alliance, within the Global Health Programs account at USAID. Adequate funding for the MCH

and Nutrition accounts is necessary to preserve effective, evidence-based, poverty-focused assistance that saves lives and helps strengthen economies in low- and middle-income countries (LMICs). We appreciate this Committee's long-standing record of supporting life-saving investments in global child and maternal health and nutrition.

Since 2000, through USAID investment, under-five child mortality has dropped by 58 percent and maternal mortality by 42 percent across USAID's priority countries. While reductions in mortality rates for women and children are two of the biggest success stories in international development, progress has slowed for more than a decade. Every year, around 5 million children under age five die from mainly preventable and treatable diseases, with malnutrition as the underlying cause of roughly half of these deaths. Moreover, nearly 300,000 women die annually of preventable causes related to pregnancy and childbirth. Additional investments will spur progress against these preventable deaths and continue to build the United States' legacy and leadership in maternal and child health and nutrition.

The MCH account supports the delivery of cost-effective, proven services in countries with the highest burden of preventable maternal and child deaths. Over the past decade, USAID programs have helped save more than 6 million lives; since 2012, USAID's lifesaving investments have enabled 57 million women to give birth in a health facility, reached 44 million newborns with care after delivery, provided 127 million treatments to children for diarrhea and pneumonia, and trained 14 million health workers in maternal and child health and nutrition. A critical portion of the MCH account supports Gavi, the Vaccine Alliance, a public-private partnership that has helped to halve child mortality in lower-income countries since 2000 by immunizing an entire generation. Gavi has helped vaccinate more than 1 billion children, preventing more than 17 million future deaths.

Resources for Gavi bolster efforts to continue necessary immunization and deliver vaccines to lower-income countries; USAID's technical support is essential to support these efforts and enable equitable access to vaccines. As Gavi works to develop its investment opportunity for the next strategic period, including the introduction of newly approved malaria vaccines, increases to Gavi should not come at the expense of bilateral funding.

The Nutrition account supports nutrition programs for women and children, focusing on the first 1,000 days between pregnancy and a child's second birthday, when interventions have an outsized impact on a child's development. Severely malnourished children are much more likely to have weakened immune systems and are at risk of permanent physical and mental stunting, which prevents them from reaching their full educational, social, and earning potential. In aggregate, malnutrition costs the world \$3.5 trillion in lost productivity and healthcare costs each year. The Nutrition account supports a targeted set of high-impact interventions that can prevent the worst effects of severe malnutrition. In 2022 alone, USAID reached more than 32 million children and 11 million pregnant women with cost-effective nutrition interventions like breastfeeding support, prenatal vitamins, and vitamin A supplementation as a part of the agency's focus on strengthening primary health care systems. USAID also provides severely malnourished children with therapeutic foods that they need to survive.

The ongoing global food crisis, fueled by conflict, natural disasters, and economic shocks, continue to threaten the lives of women and children globally. Full funding of the MCH and Nutrition accounts are critical for saving lives and reaching USAID's goal of ending preventable child and maternal deaths. To improve global maternal and child health and nutrition, we respectfully urge you to provide \$300 million

for the Nutrition account and \$1.15 billion for the MCH account – which includes \$340 million for Gavi, the Vaccine Alliance – within the GHP account at USAID.

Thank you for your serious consideration of this request. We look forward to working with you to ensure that the United States maintains its leadership in this global effort.

Sincerely,
